

Secco™+T

Faecal Management System with Super-Absorber Technology

Faecal collection bags

Irrigation sets

Secco™ FMS is a closed bowel-catheter system for the hygienic drainage of semi-fluid and fluid bowel discharge

- reduces skin irritation and pressure ulcers
- protects patients and staff from infections
- reduces complications and shortens length of stay in hospital
- protects wounds from contamination
- controls odour and improves patient comfort
- reduces cost incurred by faecal incontinence
- protects the patients' dignity

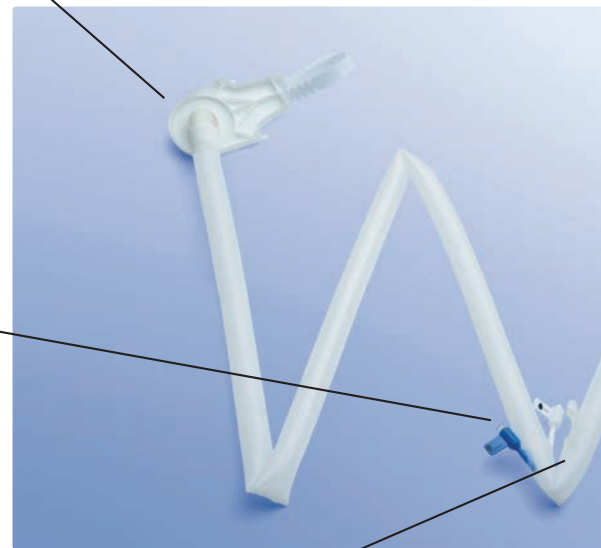

Top panel with velcro strip hanger

Disposable flushing syringe, 45 ml

Irrigation (blue) and retention (white) connectors

Sampling point

Catheter localisation marks

Secco™

Safe and simple in use

Secco™ is equipped with a unique super-absorber technology which binds infectious fluid faeces. It prevents infectious material from spreading when collecting and disposing of stool. Its unique EasyFlush surface prevents tube blockages and effectively holds odours at bay.

Safe and simple in use

- uncomplicated handling
- easy insertion
- safe disposal

Anti-odour filter

Low pressure retention balloon

1,500 ml collection bag with super-absorber

Provides more than just preservation of patient dignity

REF 52.000.00.100

Faecal incontinence is an unpleasant problem for the affected patients and plays an important role when preserving patient dignity, preventing cross-infection and avoiding skin lesions.

Secco™ provides more than just preservation of patient dignity

- longer hospital stays caused by C.difficile incurs higher costs
- patients with faecal incontinence are three-times higher at risk of developing a pressure sore
- Secco™ provides you with a low price product

REF 52.000.00.400

Description	PU	REF
